

# **Student Result Management APPLICATION**

---

1

# Introduction

---

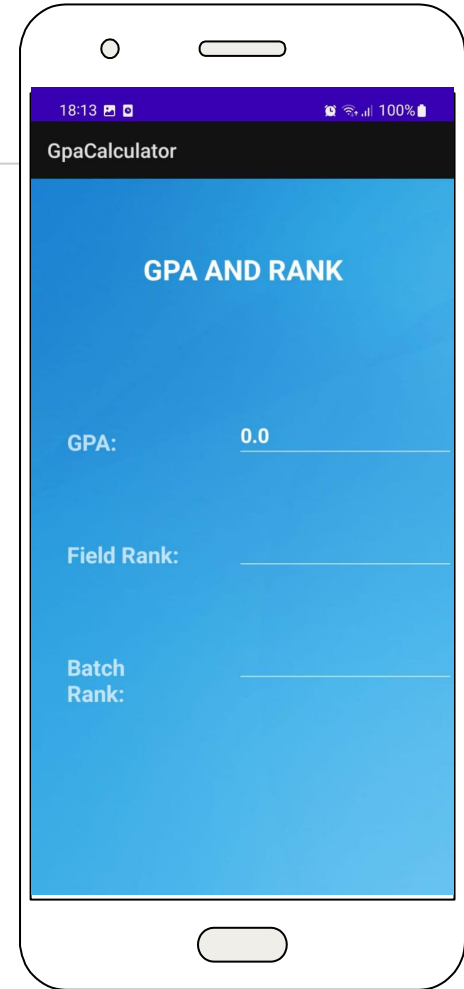

This application is built for students to analyse their marks and GPAs.

The users of the system are undergraduates. Special privileges are given to the batch admins.

Students can determine the final marks needed for a particular course to get desired grade and the grades needed to get a desired GPA.

They can also know their current GPA and rank.

Batch Admins would add semesters and courses.

## Problems/ Difficulties

Many user interfaces

Connecting everything

Calculations

4

# Further Developments

- Password recovery
- More settings for undergraduates - customization of interface etc
- 
- And some

---

# Thank You!
